Twelve hydrogen-powered cars made a pair of stops in the Southland today as part of a nine-day journey from Chula Vista to Vancouver aimed at highlighting the benefits of the alternative fuel.

The Hydrogen Road Tour began in Chula Vista on Monday and stopped today at the Santa Monica Pier, then at a West Los Angeles Shell station that features a hydrogen fueling station.

In West Los Angeles, Gov. Arnold Schwarzenegger toured the fueling facility, then touted efforts to make the state friendly for alternative-fueled vehicles.

"California set out to prove to the nation and world that low-carbon fuels and vehicles on our roads and highways are safe, affordable and viable," Schwarzenegger said. "This tour showcases what I envisioned five years ago when I launched the Hydrogen Highway.

"Our goal of a cleaner, greener and healthier California will require revolutionary new vehicle technologies and low-carbon fuels that will also spur the clean-tech economy."
